Key Concepts and Definitions of Competency-based Education
Objectives

Define the key concepts of:

• Competence and Competencies
• Competency-based Education (CBE)
Competency-based Education

“...is an approach to preparing physicians for practice that is fundamentally oriented to graduate outcome abilities and organized around competencies derived from an analysis of societal and patient needs. It deemphasizes time-based training and promises greater accountability, flexibility, and learner centredness.”

The Context for Training

• Context is as important as **content**

• Context ensures:
  - Role modeling
  - Type of patients/problems
  - Type of problem-solving (selectivity)
  - Integration skills

• Context is essential for developing one’s own identity as a family physician
The Goal of Residency Training

“To develop professional competence to the level of a physician ready to begin practice in the specialty of Family Medicine.”

Alignment sub-committee of the Triple C Competency-based Curriculum Task Force, Nov. 2011
Professional Competence

Competence

• Is the array of abilities across multiple domains or aspects of physician performance in a certain context
• Is multi-dimensional and dynamic
• Changes over time, experience, and setting

Observable Competencies

• “An observable ability of a health professional, integrating multiple components such as knowledge, skills, values and attitudes.
• Since competencies are observable, they can be measured and assessed to ensure their acquisition.”

From Competencies to Competence

By sampling competencies across multiple domains or settings, a program can infer competence, to the level of a physician ready to begin practice in the specialty of Family Medicine.

Competence

Doing the right thing at the right time in the right way in complex situations
Competence

Doing the right thing at the right time in the right way in complex situations

By using and integrating the right internal and external resources

Internal Resources
- Abilities
- Knowledge
- Attitudes
- Judgment
- Values

External Resources
- Patients and families
- FPs and other professionals

In accordance with professional roles and responsibilities
A Competency-based Program Includes

• Defining program outcomes: expected competencies of the graduate
• Providing relevant learning opportunities: through a curriculum that allows for the development of the competencies
• Assessing residents for competence: assessment of competencies as a component of the training program
How is this Different from the Traditional Model?
