DDPCI Transition Tools and Resources for Families and Caregivers of Youth with Developmental Disabilities

This document can be accessed on the Primary Care page of the Surrey Place Centre website

October 2013
Welcome and Overview – DDPCI Transition Tools and Resources for Families and Caregivers of Youth with Developmental Disabilities

Introduction

For youth with developmental disabilities (DD), the pediatric health care system can be a welcoming network of many physicians (pediatricians) and other healthcare professionals. Parents or caregivers make most of the healthcare decisions and the focus is on the family.

The adult health care system can be very different. The family doctor becomes the primary doctor and there may be fewer specialists and other health care professionals available. The family doctor will communicate with the youth directly and the young person helps to make their own healthcare decisions, when possible.

This Toolkit is designed to prepare the youth and their caregivers for transition from pediatric to adult healthcare.

What is Transition?

Transition is a process involving the purposeful, planned movement of youth with developmental disabilities from child-centered to adult-oriented care. Transition can be contrasted with a Transfer.

Transfer is a one-time event in which the responsibility of care for a young person with a developmental disability moves from child-centered care to adult-oriented care.

When Should Transition Begin?

The process of transition to adult-oriented care should begin in late childhood or early adolescence. In addition to seeing the pediatrician, the young person should be connected to a primary care provider/family doctor from age 12 to 18 or earlier. If possible, the youth continues to see the pediatrician(s) and also sees the primary care provider at least once a year, until a transfer of care is made at or after age 18. In this way, the youth will be familiar and comfortable with seeing the primary care provider. The primary care provider will know the youth, his or her strengths, his or her family/caregivers and his or her health challenges, when the youth transfers to adult care.

Key Timelines for transition from pediatric to adult health care system
(Also IEP planning through school system, focus on goals for life after school ends)

### Assessing Your Transition Needs

**The Transition Readiness Checklist**

- A questionnaire that assesses the health care skills of the youth and family caregivers. The skills reviewed are necessary for a healthy transition to adult-oriented health care. The youth and primary caregiver should complete the questionnaire together.

- The tool looks at four different health skill areas:
  - Knowledge of Health Condition(s), Medication and Treatment
  - Taking Charge of Health Condition(s), Medication and Treatment
  - Taking Charge at the Doctor’s Office
  - Daily Living Skills and Thinking About the Future

- An answer of “Yes, I do this” shows that this skill has been accomplished – the youth is one step closer to a successful transition.

- An answer of “I am learning how to do this” or “I need to learn how” suggests it is time to delve into the corresponding set of tools to build up skills in that area.
If the answer is “Someone else has to do this”, it is important to identify who will be able to help the youth with this health skill and to assess whether this caregiver needs further resources or skill development.

Be sure to review whether “Does not apply to me” is truly not valid for the youth.

**Building the Skills Needed for the Adult Health Care System**

**The Transition Skills and Resources Tool Kit**

- This toolkit builds on the Transition Readiness Checklist. It identifies the skills needed in each area of readiness, and gives tools that will help the person with DD and his or her family or caregivers to achieve each skill.
- With the pediatrician or a member of the pediatric care team, identify the most important skills to work on, and review the resources listed.
- Find resources helpful to you and your young person with DD through community organizations, other families with young people with similar challenges, and the Internet.

**What Tools and Resources** are available to help young people with DD, their families/caregivers and primary care providers (family doctors and nurse practitioners)?

Summary of Recommended Resources Used in the Transition Skills and Resources Toolkit

For young people with DD:

- **Your plan-it** from Children’s & Women’s Health Centre of BC Bookstore:
  This is a youth health planner that was developed by and for youth to ensure they are informed about their health care, involved in their health care and their futures, and confident in their choices for adult health care. The planner provides a place for youth to record, sort and organize the health care information they require on a daily basis or when arriving at a new stage in their development or transitioning to adult care. This full-colour binder is designed for youth ages 10-18 years who have a chronic health condition.

- **See also Resources in Transition Skills and Resources Toolkit.**

For families and caregivers:

- **Family care book** from Children’s & Women’s Health Centre of BC Bookstore:
  Created for youth and their families to help them prepare for adult care and adulthood. Divided into four sections, the Family Care Book asks the questions: What are our daily needs? Why do we have those needs? When do we start planning for adulthood? Where can we find the answers and resources? The home chart of 170 pages of forms helps youth record and sort information, think about and plan for the future, and look up and connect with resources in the community.

- **See also Resources in Transition Skills and Resources Toolkit.**

For pediatric and primary care providers:

- **Youth health resource package** from Children’s & Women’s Health Centre of BC Bookstore:
  For clinicians working with the youth population, the package contains one copy each of: Setting the Trac, Family Care Book, Your Plan-It, Cocktails.

  Note: **Setting the Trac** is a resource manual to assist health care professionals in integrating developmentally-appropriate care and transitioning planning into their care of youth with chronic health conditions and their families.

  - **Got Transitions**
  - **Hospital for Sick Children, Toronto** – **Good 2 Go Transition Program**
  - **CPS Position Statement** Transition to adult care for youth with special health care needs
  - **See also Resources in Transition Skills and Resources Toolkit.**

_Taking Charge of Health: Discussion and Plan (consider both the youth and their caregiver)._

_Taking Charge at the Doctor’s Office_  

16. I carry my health card in my wallet and bring important health information with me to doctor’s appointments/the emergency department (e.g., Portable Patient Profile, My Health Passport or Emergency Information Form).

17. I know the names of my doctors and other health care providers.

19. Before each doctor’s appointment, I make a list of questions I want to ask.

20. I can tell my doctor what I need during health care visits.

21. I spend time alone with my doctor at each visit.

22. I know I can talk to my doctor about sex and relationships.

_Taking Charge- Doctor’s Office: Discussion and Plan_  

_Daily Living Skills and Thinking About the Future_  

23. I know how my health conditions can affect my life and my future.

24. I know how much help I need with daily activities (e.g., bathing, dressing, cooking/eating, housework, managing money, using transit).

25. I can find help to get more education, find a job or find fun things to do.

Caregiver Tools
Criteria for Inclusion of Tools and Resources in this Toolkit

- Available and accessible, preferably online, preferably free, English language.
- Addresses one or more of the transition-readiness skills from the Transition Readiness Checklist.
- Preference for information reflecting Canadian health care system. Note: government and community resources from non-Ontario sites would need to be adapted to Ontario system by Ontario parents/caregivers.
- Ease of access, ease of use. Could be used by young persons with DD and/or their parents or caregivers at home, and pediatric team or primary care provider in a clinic setting.
- Brief listing of one or two key relevant tool(s), not meant to be inclusive, avoids being overwhelming.
- Takes brief time for quick review to check for relevance to individual person with DD.
- Reflects evidence-based or best current practice.
- Avoids re-inventing the wheel. Where helpful information exists and is accessible, provides source/website address. (Sometimes excellent examples from other sources needed to be adapted to reflect Canadian system or to fit with other DDPCI tools, in which case, credit for the original work has been given.)

The best tools are:
- Designed specifically for the transition process, from pediatric to adult health care.
- Created for young people with developmental disabilities to complete themselves, or, if needed, with help from parents or caregivers.

Some tools are included that were designed for:
- Youth with complex health needs but not developmental disabilities.
- Adults with developmental disabilities, but applicable to youth with DD.
- Families or caregivers of youth with DD.

**MyHealth 3-Sentence Summary**

### Sentences

<table>
<thead>
<tr>
<th>Sentence 1:</th>
<th>My age, diagnosis and brief medical history</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sentence 2:</td>
<td>My treatment plan</td>
</tr>
<tr>
<td>Sentence 3:</td>
<td>My question/concern to talk about during this visit</td>
</tr>
</tbody>
</table>

### Examples

#### Introduction:
Hi. My name is Alexander Smith.

#### Sentence 1:
I am 16 years old. I have Down syndrome. I have had asthma since I was little.

#### Sentence 2:
I have been taking Ventolin and Flovent since I was three.

#### Sentence 3:
I am here today because I can’t run anymore. I wheeze too much and can’t breathe.

**What I brought with me:**
Here is my Today’s Visit form, a copy of my Portable Patient Profile, and all the current medications I take.

#### Introduction:
Hi. My name is Maria Soares.

#### Sentence 1:
I am 22 years old. I have epilepsy and a mild developmental disability.

#### Sentence 2:
I take these medications (give doctor the bag with your medicines). I haven’t had any seizures lately.

#### Sentence 3:
I am here today because I am sleepy all the time. My mother winders if the medicines are making me sleepy.

**What I brought with me:**
Here is my Today’s Visit form, a copy of my Portable Patient Profile, and all the current medications I take.

#### Introduction:
Hi. My name is Sandoo Singh.

#### Sentence 1:
I am 19 years old. I have Fragile X syndrome.

#### Sentence 2:
I haven’t seen a doctor since I saw my pediatrician Dr. King two years ago.

#### Sentence 3:
I am here today because I need a form filled out by a doctor for a program I want to go to.

**What I brought with me:**
Here is my Today’s Visit form, a copy of my Portable Patient Profile, and all the current medications I take.

### Now it’s your turn

What would be most important for you to tell any doctor or health care professional you are seeing?

#### Introduction:
Hi. My name is _________________________________.

#### Sentence 1:
I am ____ years old. I have (briefly name your diagnosis and/or health problem).

#### Sentence 2:
I usually see my doctor every ____ months for ________________ (tell why you usually see your doctor) and take medications for _________________.

#### Sentence 3:
I have a problem with _______________________________ and that’s why I’m here today.

**What I brought with me:**
Here is my Today’s Visit form, a copy of my Portable Patient Profile, and all the current medications I take.

*Adapted for Persons with Developmental Disabilities from SickKids® MyHealth 3-Sentence Summary*
Especially important for the transition from pediatric to adult health care services

As family/caregivers, you will need to keep and organize important health information about the person with development disabilities (DD), starting from a young age. Having this information will help you and the person with DD:

- To communicate more effectively with doctors and other health care providers;
- To keep track of appointments and reports for the person with DD; and
- To avoid having to repeat the same information over and over to new health care providers, e.g., when making the transition from pediatric to adult health care services.

**Methods** you can use to organize health information for the person with DD:

1. **Paper-based**: Keep the person’s health-related information in a three-ring binder (on page 2, see suggestions for sections to use. These can be adapted to the particular needs of your young person, e.g., if your young person has epilepsy, you may want to have a section for epilepsy).

2. **Computer-based**:
   a) Use one of the available ‘apps’ for computers or Smart phones.
      - Look under apps for health information, personal health record, health organizer, medication record.
      - The amount and type of information varies among these apps – choose the most suitable one for your young person.
      - Many have the ability to send the file via e-mail, so information could be sent to a new doctor or health care provider.
   b) Keep the person’s health-related information on a computer and save it to a USB key to take to medical appointments, so that new health care team members could download essential health information.

**Resources**

1. **Paper-based**: Two excellent Canadian resources, one for family or caregivers and the other for the young person with a chronic health condition, were developed by the Children’s and Women’s Health Centre of B.C. to help with the transition from pediatric to adult health services. Cost for both is approximately $23.00 plus shipping and handling.

   - **The Family Care Book** helps families with children/youth with special needs to plan for their adulthood. There are 170 pages of forms to record and sort information and plan for the future.

   - **Your Plan-It** is a full-colour binder developed by youth for youth ages 10-18 years who have a chronic health condition, to keep their own health information.

2. **Downloadable forms**: The **American National Center for Medical Home Implementation** has many useful and downloadable forms. You can choose the ones you need for a personalized Health Binder or computerized Health Information Folder for the needs of your child/young person. (Note: you would need to adapt government and community resources to your location.)
Suggested Sections for Family/Caregiver Health Care Binder

**Health Issues and Diagnoses**
- Portable Patient Profile
- My Health – 3-Sentence Summary
- MyHealth 3-Sentence Summary with DD-specific examples
- Caregiver Health Assessment
- Medie-Alert information

**Contact Information and Record of Health and Dental Appointments**
- List of Health Care Providers and Specialists
- Key family members, caregivers, circle of support

**Reports of Important Assessments, Tests and Procedures**
- Genetic assessment
- Psychological assessment (needed for access to adult services in Ontario for people with DD)
- Functional assessments
- Copy of MRI or CT scan results, if ever done
- Copy of any blood tests and urine tests done in the past year, or the most recent, if none done in the past year
- Copy of reports of any X-rays or any other tests, procedures and assessments

**Medications and Treatments**
- Current medications person is taking (pharmacy can print)
- List of other medications taken in the past and why they were discontinued
- Equipment and supplies needed (name of item, ordering information, e.g., supplier’s name and contact person, catalogue number, quantity, cost, forms to submit for reimbursement, if covered by health benefits)
Individualized Needs, Goals and Plans

- **Personal Care** (In Ontario, Developmental Services Ontario (DSO). The Supports Intensity Scale (SIS) assessment is done at approximately age 18; because of waiting list, make request at age 16
- **Goals**

Doctor’s Visit Forms

- **Annual Health Review**
  a) [Annual Health Review](#) form
  b) Preventive Health issues for this person:
     1) [Health Watch Table](#) (if available for person’s syndrome)
     2) List of particular health issues or risks that doctors and health care providers should be aware of
- **Today’s Visit** – form to complete to help make doctors’ visits as effective as possible

Emergency Visit Information

If the person with DD needs to use an Emergency Department:

**Transportation Scheduler**

Completed by: ___________________________  Date: ______________

<table>
<thead>
<tr>
<th>How will you get to your appointment?</th>
</tr>
</thead>
<tbody>
<tr>
<td>□ Family/Friend</td>
</tr>
</tbody>
</table>

When you are phoning the person who is driving you, have these things ready:

- □ Phone number of the person who is driving you
- □ Name and address of the doctor
- □ Date and time of your appointment
- □ Your address and telephone number
- □ Calendar

When you phone the person who is driving you, say the following:

Hello, this is (say your name).

I need a ride to get to my doctor’s appointment on (say date and time).

I am going to (give name and address of the doctor).

I will need a ride back to (give your address).

Can you do this?  (If not, call ____________________________).

What time will you pick me up?  (Write down the time.)

Who do I call if there is a problem?  (Write down the phone number.)

* If you are taking a taxi or WheelTrans, don’t forget to bring money to pay for the trip.

Mark on your calendar:

- □ Location of doctor’s appointment.
- □ Date and time for transportation pick up.
- □ Phone number to call if there is a problem.

Etiology of developmental disability:
Level of adaptive functioning:  □ Mild    □ Moderate    □ Severe    □ Profound
Comments:

Other current diagnoses:

Current Medications/Treatments:

Allergies/Adverse Reactions (e.g., nuts=hives):

Past Medical Concerns or Hospitalizations:
Recommendations:

- Portable Patient Profile or medical summary
- Immunization Record
- Report of genetic assessment
- Psychological and functional assessment reports
- Other significant tests and assessments
- Most recent Transition Readiness Checklist

To enhance collaboration…

The Pediatrician or Pediatric Team will:

- Perform Transition Readiness Checklist when the patient is 14 years of age and, with the patient and family or guardians, document discussion and skill building priorities. Reassess and continue to build skills yearly.
- Encourage youth with DD to have a yearly visit with a primary care physician by the age of 16, to facilitate patient-physician relationship and transition.
- Identify key health issues and recommendations to patient, family and primary care physician.
- Send this Transfer of Care Plan to primary care physician.
- Telephone the primary care physician/nurse practitioner to complete the transfer.

The patient, with support from family/caregivers, will:

- Work on learning and practicing skills identified in the Transition Readiness Checklist.
- Show up for appointments and be on time.
- Bring written questions (e.g., on Today’s Visit form), Portable Patient Profile and all current medications, including any alternative, complementary therapy supplements to doctors’ appointments.
- At each visit, tell the doctor the most important health issue for the visit and any concerns or questions.
- Remember to take medications, follow through with tests, and follow treatments (list any specifics).

The Primary Care Physician/Nurse Practitioner will:

- Reassess patient’s skills from Transition Readiness Checklist with patient and family/caregivers, addressing gaps in knowledge and skills.
- Follow through on recommendations and issues identified by the pediatrician as needing attention.
- Monitor patient’s general health.
- Work with patient and Substitute Decision-Maker on issues of health care decision-making and informed consent.
- Make referrals to adult specialists, as needed, and if not done by pediatric specialists.
